

Javelin PDC technology is perfectly designed to effectively drill out frac plugs with superior bit durability and extending the life of the drill assembly. The advanced cutter layout and hydraulic efficiency of the design is proven to deliver desirable cuttings for more efficient plug part removal, reducing the risk of plugged-off surface equipment during flow-back operations.

Application

- Frac plug drill out of any conventional type plug used in well fracking
- Clean out producing well bores
- For all motor and rotary applications

Features / Benefits

- Low torque response and efficient drilling performance
- Extended BHA life and operational consistency
- Peace of mind in eliminating unnecessary trips and NPT
- Increased confidence with more plugs and faster drillout times
- Proven track record with customer benchmark performances
- Available in all common sizes utilized for re-frac operations
